                 GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Field, Loren J.

APPLICANT: Pasumarthi, Kishore Babu S.

APPLICANT: Pasumarthi, Kishore Babu S.

TITLE OF INVENTION: CARDIOMYOCYTES WITH ENHANCED PROLIFERATIVE POTENTIAL,

TITLE OF INVENTION: AND METHODS FOR PREPARING AND USING SAME

FILE REFERENCE: 7037-450

CURRENT APPLICATION NUMBER: 2001-12-18

PRIOR APPLICATION NUMBER: 60/139,942

PRIOR FILING DATE: 1999-06-18

PRIOR FILING DATE: 2000-06-19

NUMBER OF SEQ ID NOS: 8

NUMBER OF SEQ ID NOS: 8

SOSTWARE: PATENTIN Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

C;Species: Schizosaccharomyces pombe
C;Date: 21-3an-2000 #sequence_revision 21-Jan-2000 #text_change 18-Feb-2000
C;Accession: T43653; T40791; T43654.
R;Westwood, P.K.; Preston, N.C.; Fantes, P.A.
Submitted to the EMBL Data Library, March 1999
A;Description: Schizosaccharomyces pombe cdc37 cDNA.
A;Reference number: Z22602
A;Accession: T43653
A;Status: precliminary; translated from GB/EMBL/DDBJ

-i- INDUCTION: Highly expressed, but only in cells subject to sulfur limitation, and it is turned on by the positive-acting Cys-3 sulfur regulatory protein.
-i- MISCELLANEOUS: SULFATE PERMEASE II IS MAINLY FOUND IN MYCELIA.
-i- SIMILARITY: BELONGS TO THE SLC26A FAMILY OF TRANSPORTERS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                    PROBABLE REVISIONS.

FUNCTION: THIS PROTEIN BINDS DIRECTLY TO 23S RIBOSOMAL RNA AND IS NECESSARY TO THE IN VITRO ASSEMBLY PROCESS OF THE 50S RIBOSOMAL SUBUNIT; IT IS NOT INVOLVED IN THE PROTEIN SYNTHESIZING FUNCTIONS OF THAT SUBUNIT (BY SIMILARITY).

-! SIMILARITY: BELONGS TO THE L20P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE=21267165; PubMed=11353084;

-i- FUNCTION: DNA-DEPENDENT RNA POLYMERASE CATALYZES THE TRANSCRIPTION

of DNA INTO RNA USING THE FOUR RIBONUCLEOSIDE TRIPHOSPHATES AS

SUBSTRATES (By similarity).

-i- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE FROM N.A.

Cell 61:1051-1061(1990)

COMPOSED OF THE TGF-BETAI MOLECULE NONCOVALENTLY ASSOCIATED WITH

CELL FIFEBERAL PREDENCENCE OF A DIMER OF THE N-TERMINAL PROPERTIDE

OF THE TGF-BETAI PREDURSOR AND A THIRD COMPONENT DENOTED TGF-

BETAAL-BP. TGF-BETAI-BP DOES NOT BIND DIRECTLY TO ACTIVE TGF-BETAI.

CITCHERNATIVE PRODUCTS: 2 isoforms; a short form (AC P22064) and a long form (shown here); are produced by alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
ENZYME WHICH IS COMPOSED OF 2 ALPHA CHAINS, 1 BETA CHAIN, AND 1 BETA' CHAIN (By similarity).
SIMILARITY: BELONGS TO THE RNA POLYMERASE BETA' CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           "Efficient association of an amino-terminally extended form of human latent transforming growth factor-beta binding protein with the extracellular matrix.";

-!- SUBUNIT: THE LARGE LATENT COMPLEX OF TGF-BETA1 FROM PLATELETS IS

-!- COMPOSED OF THE TGF-BETA1 MOLECULE NONCOVALENTLY ASSOCIATED WITH
A MASKING PROTEIN CONSISTING OF A DISULFIDE-BONDED COMPLEX OF A
DIMER OF THE N-TERMINAL PROPERTIDE OF THE TGF-BETA1 PRECURSOR AND
A THIRD COMPONENT DENOTED TGF-BETA1-BP (OR MP LARGE SUBUNIT).

TGF-BETA1-BP DOES NOT BIND DIRECTLY TO ACTIVE TGF-BETA1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-JUL-1993 (Rel. 26, Created)

MITCHELLOUGE C., Traboni C., Cortese R.;

Tisolation of two cDNAs encoding zinc finger proteins which bind to the alpha 1-antitrypsin promoter and to the major histocompatibility complex class I enhancer. The ALPHA1-ANTITRYPSIN PROMOTER, TO THE KAPPA INTOCOMPLIANT GENE ENHANCER, AND TO THE MAJOR ATTHE TRAPER INTOCOMPATIBILITY COMPLEX CLASS I ENHANCER; THE ALPHA1-ANTITRYPSIN EXPRESSION IT MAY ACT RESULAND.

AS A NEGATIVE REGULATOR BY INTERFERING AT THE ALPHA1-ANTITRYPSIN COLOR WITH ANOTHER NUCLEAR PROFEIN, CALLED LF-B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
